

Gefäßfüller (Vessel-Filler)

[EG-Sicherheitsblatt](#)

- to check and amend the pressure cushion in expansion tanks
- prevents corrosion in expansion tanks
- non-inflammable

Gefäßfüller (Vessel-Filler) is a special product to check and amend the pressure buffer in diaphragm pressure expansion tanks in heating and oil supply systems. Gefäßfüller (Vessel-Filler) has anti-corrosion properties.

Instructions for use:

- Screw the connection adapter onto the valve screw thread until a slight hiss can be heard.
- Then screw back half a turn so that no contents escape.
- Now attach the filling valve to the pressure balance container.
- The manometer on the connection adapter now shows the exact pressure.
- If the pressure is too low, turn the can to the right thus activating the ball valve and charging the container.
- If the amount to be replaced is high, stop the process at intervals to check the pressure.
- After refill completion, first close the valve screw head by turning back. Then disconnect the filling valve from the container and screw the connection adapter from the can to avoid damage to the valve during transport.

Packaging

Gefäßfüller (Vessel-Filler) is available in 400 ml aerosol cans

Safety

The container is pressurized. Protect from sun and temperatures above 50° C . Do not open forcibly or burn, even when empty. Do not inhale the aerosol. Keep away from children. Only use in well-ventilated areas.

Disposal advice

Do not dispose of the can in the domestic waste. Discard the totally emptied can into the recyclable waste container (green dot)
